The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The claimed "compression segment" and "insertion segment" should be identified in the specification. It appears to the examiner that the claimed "compression segment" includes segments S1 and S2 while the claimed "insertion segment" includes segments S3 and S4. Applicant should confirm this understanding if it is correct.

Claims 16-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 16 is confusing and inaccurate since the portion (line 8) has no taper and thus cannot be said to have an inward taper.

Claims 13 and 15-22 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Clark et al. (6,491,697). Clark et al. disclose an injector body having a tip comprising a compression segment (the main part of funnel shaped portion 103 except for a short distal segment thereof) and insertion segment (the combination of distal portion 105 and the short distal segment of funnel shaped portion 103), the compression segment having a first outer

Art Unit: 3731

diameter (i.e. a diameter slightly larger than the diameter of distal portion 105) at a location where the compression segment is attached to the insertion segment, the insertion segment having slots 121 through a portion that extends from the open end, the portion having the slot having a constant outer diameter (i.e. the diameter of portion 105) which is constant as seen in the drawings), the constant outer diameter being smaller than the first outer diameter. Although the claimed "insertion segment" of Clark et al. includes both a tapering segment and a non-tapering segment, the "insertion segment" of applicant's invention includes both a tapering segment S3 and a non-tapering segment S4. Alternatively, it would have been obvious that the diameter of the portion having slots 121 is constant since the figures show this.

Claims 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Clark et al. (6,491,697). Clark et al. fail to disclose the specific dimension. However, it is old and well known to make the size of an insertion segment of an IOL injector as claimed in order to obtain the advantage of permitting easy insertion of the injector into the eye. It would have been obvious to so size the Clark et al. IOL injector so that it too would have this advantage.

Applicant's arguments with respect to claims 13-22 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
